

REGULATIONS FOR FLIGHTS OVER 5K

1. Winds must be less than 7 MPH
2. There will be an RSO committee of 3 senior members of NAR or Tripoli, one being a club officer, one being the current RSO and one other volunteer. All must be at least level one flyers
3. The RSO committee will make the call on the flight. Their decision will include the normal safety criteria, along with an evaluation of current conditions, launch rod angle for safe ballistic recovery and other appropriate criteria.
4. Recovery must be either dual deployment, or streamer. Streamers are allowed only where they would be appropriate for the safe recovery of the rocket, i.e. a 50 lbs bird would not be allowed to recover on a streamer.
5. Motor must be "K" impulse or less.
6. Other members of SPARC are allowed to observe, but not participate in the decision making. The idea is to mentor less experienced flyers.
